3. A ball is thrown up in air from the ground level, reaches the maximum height of 45 meters and travels a horizontal distance of 75 meters from the point of projection. Trace the path of the curve and identify it (scale 1 : 1000).
4. The orthographic views are given below. Draw its auxiliary views :

PART—B

10×4=40

- Instructions :** (1) Answer *any four* questions.
(2) Each question carries **ten** marks.
(3) All dimensions are in mm.
(4) Use first-angle projection.

5. Draw an ellipse whose major axis is 120 mm and minor axis is 70 mm, using concentric circles method.

6. The following figure shows the pictorial view of an object. Draw to a full-size scale the following views in first-angle projection :

(a) Front view through A

(b) Side view through B

(c) Top view through C

Show all hidden lines also.

7. Draw the isometric view of the object whose orthographic views are given below :

8. A cone of 50 mm base diameter and axis 60 mm, rests on HP on its base. It is cut by a section plane inclined at 30° to the HP and perpendicular to VP and also passing through a point 30 mm below the apex. Draw the development of the lateral surface of truncated cone.
9. A hexagonal pyramid of base side 30 mm and height 80 mm is resting on the ground with its axis vertical. It is cut by a plane inclined at 30° to the HP and passing through a point on the axis at 30 mm from vertex. Draw the front view and sectional top view.
10. A square plane 40 mm side stands on its side on HP and its plane is parallel to VP. Draw its projections.
